configure: WARNING: unrecognized options: --with-ldap, --with-xinerama, --with-pam

The development package of Hspell is not installed, I couldn't find hspell.h.

Spell-checking Hebrew with libhspell will not be available.

If you need it, install hspell >= 0.9 from sources

see <http://www.ivrix.org.il/projects/spell-checker/>

or from packages your distribution provides.

Your ld doesn't support unversioned version scripts.

KDE will continue to build and run just fine, but you might experience a small performance penalty.

If you're running Linux, your binutils are probably too old.

If you're running non-linux your platform might simply not support it.

libacl was not found. Without that library, you will not be able to manage access control lists on file systems that support them, such as ext3 or reiserfs.

You can download it from ftp://oss.sgi.com/projects/xfstools/cmd_tars/
(you will need attr too)

```
perl -pi -e 's/-Xlinker -framework -Xlinker /-Wl,-framework,/g' Makefile
perl -pi -e 's/-framework /-Wl,-framework,/g' Makefile
perl -pi -e 's/-weak_framework /-Wl,-weak_framework,/g' Makefile
```
